BLUESCAN
HIGH CASTABLE RESIN

Reliable Printability

Extreme Castability

UV Post-curing: not needed

DLP and LCD machines

X-Wax is **the first resin used as real wax for 3D printing**. It allows jewelers and designers to create models without expensive wax printers. **It ensures extreme casting and flexible production.**

X-Wax compared to Polyjet machines delivers up to **5x faster printing**. Printed products offer **smoother, more detailed surfaces with less polishing and metal loss**. It's **affordable for LCD and DLP printers**, making high-quality jewelry casting more **accessible and cost-effective**. Due to its properties, this castable resin can be described as **liquid wax**.
